R code inside math notation R Markdown

Question

In R Markdown, I can get an inline r code chunk to run inside single $ math notation (only with a * before), but not double $$ math notation:

- $H_o = 2$

works, but:

$H_o = 2$

doesn't work, and neither does:

$$H_o = 2$$

The double **$$** is more flexible being able to put math notation on multiple lines, but how can you add inline code chunks inside?

Answer

It appears to work just fine for me!

$$H_o = 2$$
